MyCheck™ SELF BAG DROP

MyCheck Hybrid Self Bag Drop is equipped with hardware and software features aimed at managing the Security and the Safety of the Self Service process.

Equipped with a Siemens S7 Safety PLC, integrated Emergency Stop system, Dynamic Intrusion detection and a Safety Bar for conveyor backtrack operations, the MyCheck SBD is designed to integrate seamlessly into your Airport safety systems and policies.

Dynamic Intrusion system is able to see objects and people and stop the system during unauthorised activities.

Emergency Stops available for Passenger, Check-in Agent and line of sight immediate stoppage of the system.

Life detection verification is performed before baggage can be inducted.

The Fast Shutter door, located at the end of the fixed tunnel, is a physical barrier preventing unauthorized access to the takeaway conveyor of unidentified objects, people and animals.

The ultra low-height conveyor is equipped with a safety bar which prevents any injury to passenger during reverse operation.

Features and benefits

- Automatic and secure control of conveyor belt
- (Patented) Safety bar to prevent injuries in reverse mode
- (Patent Pending) Dynamic Intrusion Detection system
- Fast shutter door to prevent access to takeaway conveyor
- Sign of life detection system
- 3 Emergency stop possibilities
- Integrate seamlessly with your BHS Emergency System
- Automated notifications on alarm to Agent Mobile Application
- Foreign Objection detection whilst system is in motion
